Appendix A: Listing of Current PCI Values

Introduction

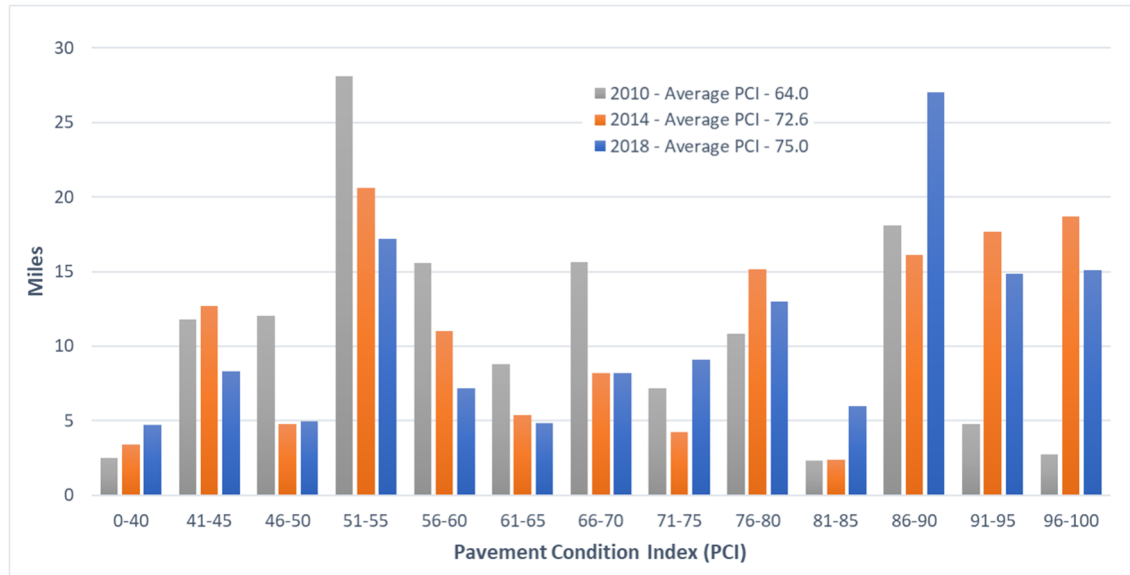

The Town of Monroe retained VHB in the autumn of 2018 to perform a complete condition assessment on its roadway pavements. The Town has made significant investments in roadway improvements in recent years. The improvement in the overall condition of the Town of Monroe pavement network since 2010 has been significant. As will be further explained below, the average “pavement condition index” or “PCI” value in Town has improved from a 64 in 2010 to a 75 today. This level of improvement requires both a commitment by the Town to provide the necessary funding and resourcefulness in how the available funds are used.

The following report summarizes the current pavement conditions in Monroe, and provides an estimate of future overall pavement conditions, based on different funding assumptions. The purpose of this report is to provide the Town with the information it needs to make decisions with regard to its future roadway maintenance and improvement budget.

Summary of Current Conditions

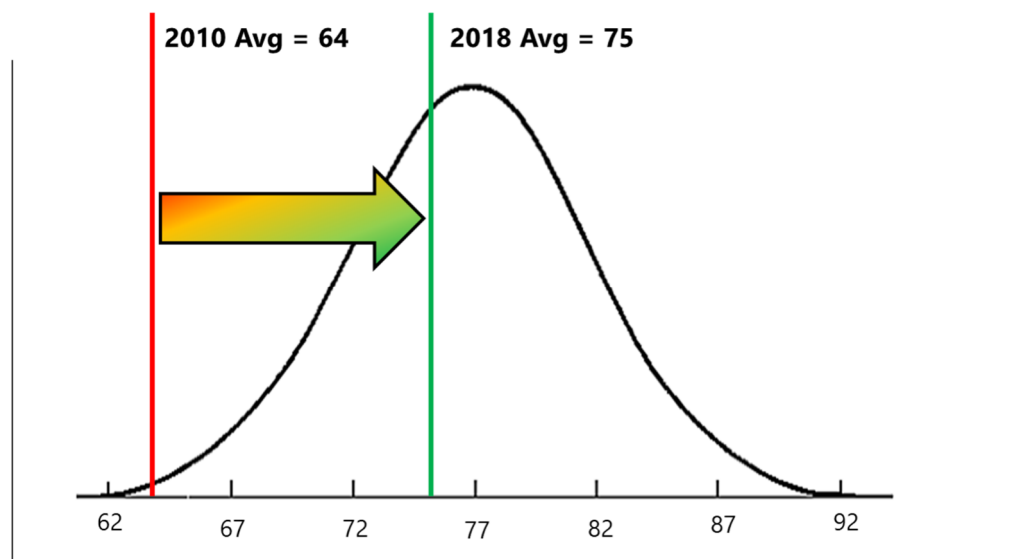

The pavement management software interprets pavement distress information collected in the field to calculate a pavement condition index (PCI) for each pavement segment. The PCI is a rating between 0 and 100, where “100” represents a perfect pavement and “0” represents a completely failed and impassible pavement. The most recent pavement condition information for the Town of Monroe shows that the network average PCI is 75, which represents an 11-point improvement from 2010. The overall change in pavement conditions over the last 9 years, broken out by 5-point PCI increments, is shown in Figure 1.

Figure 1 PCI Distribution Chart

As the chart above shows, the number of miles of pavement below a PCI of 70 has steadily decreased since 2010, which is excellent, since roads in this PCI range are generally in need of relatively expensive treatments, as later in this report. The number of miles of pavement with a PCI of 86 or greater has increased since 2010, which is also a positive trend.

Figure 2 Average PCI Comparison Chart

As another way of measuring the progress made in Monroe in the last 8 years, the chart above compares the average PCI values from 36 municipalities in Connecticut, Massachusetts, and New York to the average PCI in Monroe – both in 2010 and today.

In 2010, the average PCI in Monroe was one of the lowest in any community. Today, the conditions in Monroe are very near the average of all communities. This level of improvement is significant, and noticeable to the travelling public.

Treatment Bands

Treatment bands are classifications into which similar pavement repairs are grouped for the purposes of planning and summarizing pavement improvement needs. Treatment bands are defined by PCI ranges. The five treatment bands for roadways in the Town of Monroe are listed below, along with their corresponding PCI range and example pavement repairs.

Table 1 Treatment Band Descriptions

Treatment Band	PCI Range	Repairs
Do Nothing	93 – 100	None
Routine Maintenance	86 – 92	Crackseal and patch
Preventive Maintenance	73 – 85	Double Hima or Microsurfacing
Structural Improvement	51 – 72	Level & Overlay or Mill & Overlay
Base Rehabilitation	0 – 50	Cold-in-place and 2" Overlay

Backlog of Pavement Improvement Needs

The term “backlog” is used to refer to the total amount of pavement improvement needs on the Town’s road network at a given point in time. Calculating the current backlog of work provides the Town with a snapshot of current needs and gives the Town an idea of the type of repairs it should consider in its current and future plans. The backlog can also be used as a gauge of the effectiveness of the Town’s repair strategy. One of the Town’s goals should be to maintain or to reduce the total repair backlog over time. In fact, the estimated backlog of pavement improvements in Monroe has decreased significantly since 2010. The current backlog of work required on all Town maintained roads is summarized below, broken out by the treatment bands described above.

Table 2 Current Backlog of Needs by Treatment Band

Treatment band	Dollar Backlog	Miles
Do Nothing	\$ 0	32.3
Routine Maintenance	\$ 285,927	26.8
Preventive Maintenance	\$ 1,519,410	22.7
Structural Improvement	\$ 9,091,621	40.5
Base Rehabilitation	\$ 6,938,705	17.9
Totals:	\$ 17,835,663	140.2

Figures 2 and 3 below show that while capital improvement needs account for only 42% of the outstanding work by mileage, they represent 90% of the total backlog of work by cost. Also note that approximately 58% of the Town’s miles are in need of routine maintenance, preventive maintenance, or nothing at all. While this equates to over half of the outstanding needs in terms of miles, it represents only 10% of the dollars required. This emphasizes the value and importance of performing routine and preventive treatments in a timely manner, to preserve the condition of over 50% of the Town’s pavement network.

Figure 3 Backlog of Outstanding Work by Mileage

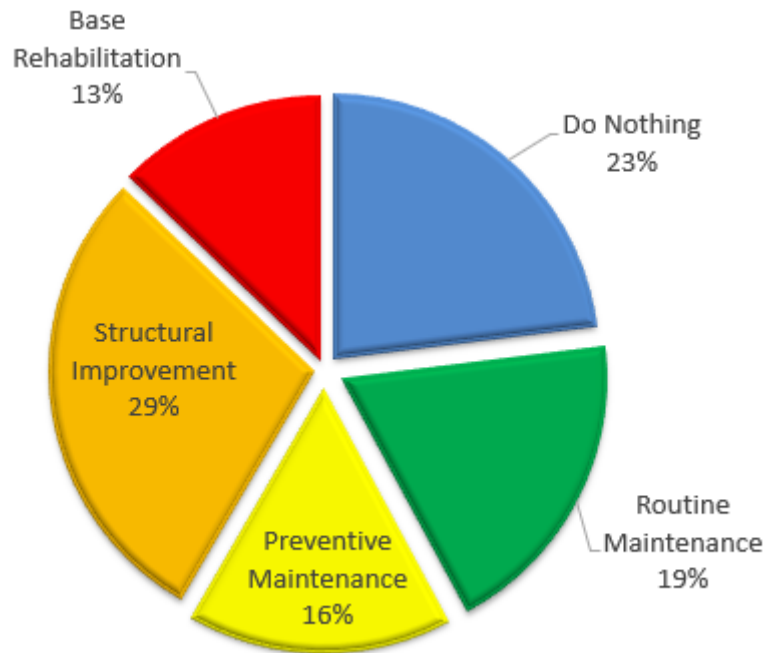

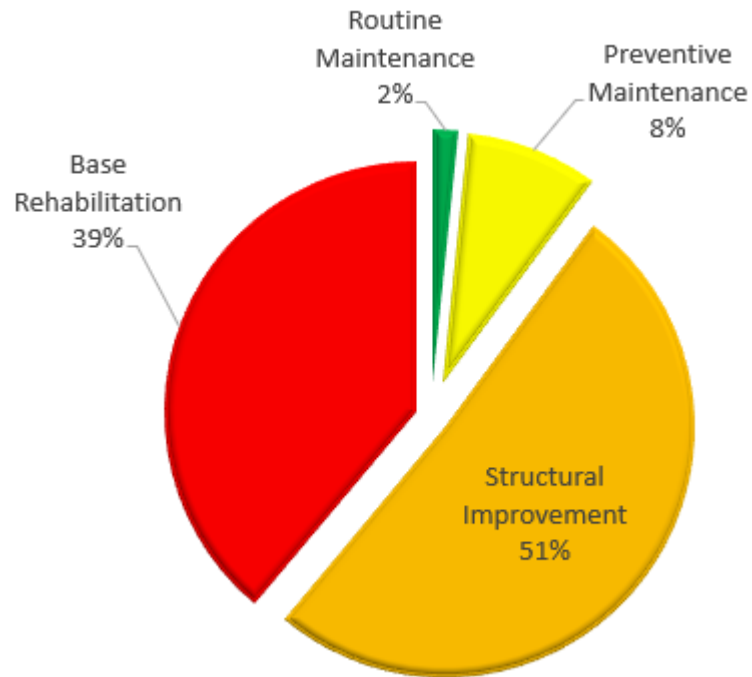

Figure 4 Backlog of Outstanding Work by Cost

Budget Scenarios

The pavement management system uses pavement conditions and characteristics, treatment unit costs, and projected pavement deterioration trends to estimate the effects of various road budget scenarios on the overall pavement conditions over time. As part of the budget analysis process, the software “ages” the pavement using a deterioration curve to predict future pavement conditions.

Given the backlog of work described above, VHB compared the effects of the following three budget scenarios on the overall pavement conditions in Monroe:

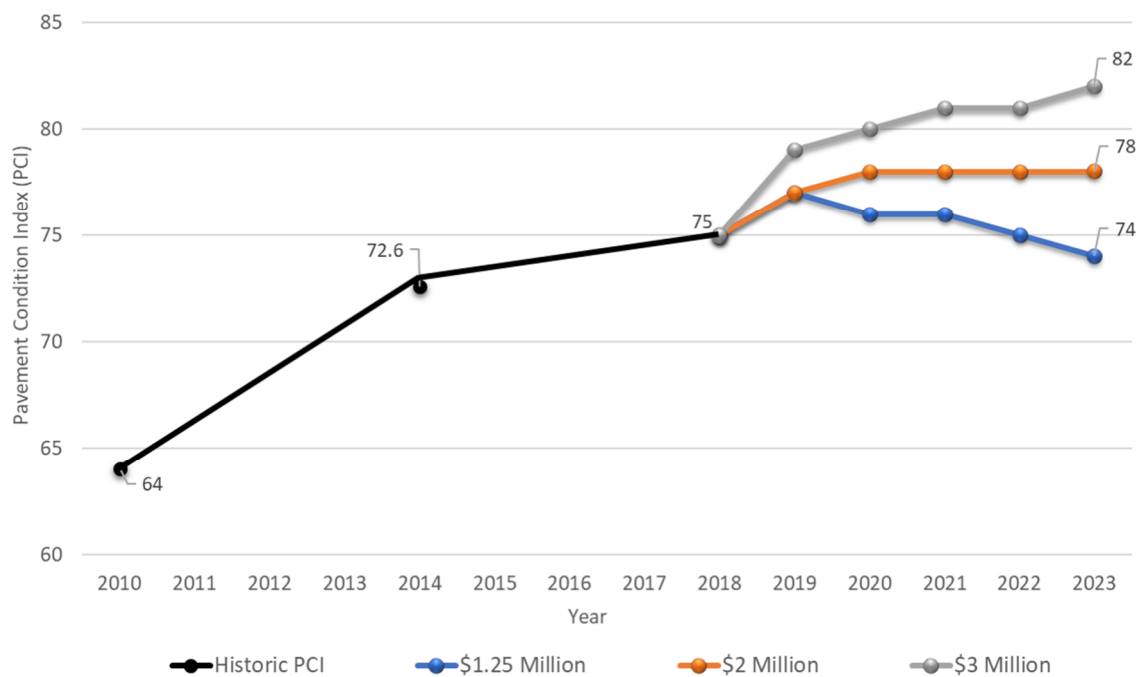

- **\$1.25 Million per Year** – Investing \$1.25 Million every year results in a very slight decrease in overall average condition after five years. It is VHB’s understanding that this is the current funding level in Monroe.
- **\$2 Million per Year** – Investing \$2 Million every year results in an increase in overall condition to an average PCI of 78 over five years.
- **\$3 Million per Year** – Investing \$3 Million every year results in an increase in overall condition to an average PCI of 82 over five years.

Budget Analysis Results

The right side of Figure 4, from 2018-2023, shows projected average pavement conditions in Monroe resulting from each of the three potential funding levels. The left side of the figure shows the recorded average pavement condition in Monroe from 2010-2018.

Figure 5 Future Pavement Condition Projections

The historic PCIs again show that the average pavement condition in Monroe has improved significantly since 2010. It should be noted that as the Monroe road program has progressed, the approach has shifted somewhat from using preservation and mill and overlay treatments on roads where these treatments could provide an improved pavement surface to making roadway base and drainage improvements prior to improving the pavement surface. A significant effort was undertaken in 2015 to determine where drainage system improvements were needed. The approach followed since 2015 is to make drainage improvements the year prior to pavement resurfacing. This approach, which will provide long lasting improvement, does result in fewer miles being improved for a given budget. On average, 9.5 miles of pavement surface was treated between 2011-2014, while 3.9 miles were treated between 2015-2018.

Future projections show that investing \$1.25 Million per year may not be enough to maintain the current average PCI level. It is estimated that maintaining this funding level would result in a slight decrease in the average PCI beginning just a few years from now. An investment of \$2 million or more per year is estimated to continue to improve the overall condition of Monroe's pavements. This funding level is consistent with what was recommended in a similar analysis conducted in 2010.

Concluding Remarks

As mentioned previously, through the commitment of funding, and the resourceful use of that funding, the Town of Monroe has made significant improvement in the overall pavement conditions in Town over a relatively short period of time. The level of improvement realized is something that Town elected officials, staff, and residents should be proud of.

Going forward, VHB recommends that the Town provide funding sufficient to reach the Town's pavement condition goals. It is important that the Town of Monroe continue to prioritize pavement improvement projects that include both capital improvements as well as routine and preventive maintenance treatments that will preserve the condition of roads currently in fair and good condition. These programs have significantly impacted the roadway network Town-wide, increasing average conditions from a PCI of 64 to a PCI of 75 in less than ten years. Effective spending of an appropriate funding level will allow this impressive trend to continue.
